

Design Range of Consumer Units

Features Comparison

Surface Mounted Consumer Units

		Design 10	Design 30
Feature	Description		
Rectangular Knockouts	Knockouts designed to accommodate common sizes of trunking for surface mounting cables.	●	● *
Grommet Strips	Provided to fit around the rougher edges of the knockouts to protect incoming cables.	●	●
Front cover retained screws	Screws attached to the front cover are retained to prevent loss during the installation	●	●
Cable Clamp	Incoming meter tails can be safely secured, eliminating stress within the switch terminal.	○	●
Cable Protector Plate	Allows cables to enter the rear of the board without the risk of damage from sharp edges.	○	●
Locate & Hold Cover	Locates and holds the cover during installation, reducing the risk of damage, leaving both hands free to fix the cover to the base.	—	●

● Available as standard

○ Available as an accessory

— Not Compatible

* Knockouts available by choice on Design 30 range. References ending with a 'K' will contain knockouts.

Hagers metal consumer unit ranges

For many years the Hager name has been synonymous with consumer units in the UK, having manufactured more than 4 million in the UK at our Telford site. Changes in January 2015 to the Wiring Regulations with the publication of Amendment 3 have had an impact on the installation practice for household (residential) consumer units.

What the regulations say:

Amendment 3 states that:

421.1.201

Within domestic (household) premises, consumer units and similar switchgear assemblies shall comply with BS EN 61439-3 and shall:

- (i). Have their enclosures manufactured from non-combustible material, or
- (ii). Be enclosed in a cabinet or enclosure constructed of non-combustible material and complying with Regulation 132.12.

NOTE 1: Ferrous metal e.g. steel is deemed to be an example of a non-combustible material.

NOTE 2:* the implementation date for this regulation was the 1st January 2016. This does not preclude compliance with this regulation prior to this date.

What the regulations mean:

Guidance from BEAMA (British Electrotechnical and Allied Manufacturers Association) who represent the UK manufacturers.

The Intent of regulation 421.1.201 is considered to be, as far as reasonably practicable, to contain any fire within the enclosure and to minimise flames from escaping a consumer unit in the event of a fire.

The following Q&A's cover key points.

1. What is a definition of non-combustible?

There is no published definition for 'non-combustible' that aligns with the intent of regulation 421.1.201. Ferrous metal is deemed to be one example of a non-combustible material that meets the intent of the regulation.

2. What constitutes a 'non-combustible enclosure'?

A non-combustible enclosure includes base, cover, door and any components e.g. hinges, covers, screws and catches, necessary to maintain fire containment. (See diagram 1). Blanks and devices are contained within the non-combustible enclosure.

3. How is account taken of cable entries into a 'non-combustible enclosure' with respect to containment of internal fire and escape of flames?

Good workmanship and proper materials must be applied by the installer. The cable installation entry method shall, as far as is reasonably practicable, maintain the fire containment of the enclosure. Account shall be taken of the manufacturers instructions, if any.

4. What is meant by 'similar switchgear assemblies'?

'Similar switchgear assemblies' are assemblies used for the same fundamental application as consumer units.

5. Does regulation 421.1.201 apply to consumer units and similar switchgear assemblies installed in domestic (household) garages and outbuildings?

Yes, the intent of regulation 421.1.201 is that it applies to consumer units and similar switchgear assemblies to BS EN 61439-3 inside all domestic (household) premises including their integral/attached garages and outbuildings or those in close proximity. See IET on site guide BS 7671:2008 + A3:2015 for more information.

Design 50, 30, 10

The Hager Design range of consumer units includes surface, dual row and flush options, with multiple solutions based around applications. Whether the unit is required simply for functionality or whether aesthetics are to be considered, we have the solution for you.

Design 10 is the entry level board designed for all applications. As with all models in the range, there is ample cable space available even when RCBOs are fitted. The top mounted terminal rail makes the wiring of the neutral and earth connections neat and simple. Multiple fixing points, and a full metal DIN rail ensure the devices sit square.

Design 30 is an enhanced version designed to be more aesthetically pleasing whilst including extra features to ease installation. Further to the features in the Design 10, the Design 30 comes supplied with a cable clamp installed which allows for incoming meter tails to be safely secured, eliminating stress within the switch terminal.

The board is lockable providing the ability to isolate circuits and secure the consumer unit prior to occupation of property. A rear cable protection plate is also included as standard, minimising the risk of damage from sharp edges. Lastly, the Design 30 is available without knockouts to give the ultimate smooth finish for where boards are on display and cables enter from the rear.

Design 50 is the latest addition to the Design range, focusing on clean aesthetics and a flush fit for seamless integration into any home. Design 50 comes with the installation features you would expect, such as incoming cable clamp and protector plate, as well as a series of colour options, finishes and sizes. There's a Design 50 for any home environment.

Protection Devices	21

Design 50

A consumer unit which blends into any home.

The Design 50 comes as standard in white, but additionally you can have a bespoke board with any RAL colour, or even a custom design can be vinyl wrapped onto the board to provide a truly individual unit for every home.

Furthermore, Design 50 is also available with anodised finishes to fit into the modern home environment. the Design 50 can be anodised to one of five different modern finishes; natural silver, pale umber, bronze, gold and black with the surrounding edge plates painted to colour match. -With the variations in finishes and smooth edges and curves, Design 50 can be customised to fit seamlessly into any location within the home.

VSR114

Switch Disconnecter

Metal switch disconnecter incomer enclosures, single row from 2 to 20 outgoing ways.

Enclosures come supplied with a full metal DIN rail, 100A switch disconnecter incomer and full complement of earth and neutral

terminals along with marking labels, busbar, instructions, rear cable protector plate and meter tail clamp.

Recommended for use with TT systems when utilising RCBO on outgoing circuits.

Conforms to BS EN 61439-3 including Annex ZB (16kA rating). Adjustable depth in wall 72mm-92mm.

All boards contain rear cable entry, along with top & bottom knockouts.

Description	Size	Cat ref.
10 Way 100A Switch Disconnecter Incomer	4	VSR110
14 Way 100A Switch Disconnecter Incomer	5	VSR114
20 Way 100A Switch Disconnecter Incomer	7	VSR120

VSR710C

Split Load

Metal split load and configurable enclosures, single row from 6 to 16 outgoing ways.

Enclosures come supplied with a full metal DIN rail and 2 RCCBs and full complement of earth

and neutral terminals along with marking labels, busbar, instructions, rear cable protector plate and meter tail clamp.

Conforms to BS EN 61439-3 including Annex ZB (16kA rating).

Adjustable depth in wall 72mm-92mm.

All boards contain rear cable entry, along with top & bottom knockouts.

Description	Size	Cat ref.

16 Way Configurable 100A Sw 2*80A 30mA RCCB	7	VSR816C

VSR810CU

High Integrity

Metal split load and configurable enclosures with ability to protect selected circuits with RCBOs and remainder of circuits split across two RCCBs. Single row from 10 to 16 outgoing ways.

Enclosures come supplied with a full metal DIN rail and 2 RCCBs and full complement of earth and neutral terminals along with marking labels, busbar, instructions, rear cable protector plate and meter tail clamp.

Conforms to BS EN 61439-3 Including Annex ZB (16kA rating). Adjustable depth in wall 72mm-92mm.

All boards contain rear cable entry, boards with knockouts also contain top & bottom knockouts.

Cable entry

The knockouts are designed to accommodate 100mm x 50mm, 50mm x 50mm and 40mm x 25mm trunking, allowing easy access to the board when surface mounting cables, along with a robust method of achieving the IP rating.

Locate and hold cover

Locates and holds the cover during installation, reducing the risk of damage, leaving both hands free to fix the cover to the base.

Lockable Front Door

Provides the ability to isolate circuits and secure the consumer unit prior to occupation of property.

Cable protector plate

Allows cables to enter rear of board without the risk of damage from sharp edges. The knockout is removed using suitable tools and then the protector plate is inserted and clipped into place.

Cable space

Maximum cable space is available even with RCBO's fitted to make installation easier and faster.

Grommet Strip

Grommet strip is included with every board for protection against edges on knockouts.

Rigid Top Wall

Enhances rigidity to prevent distortion when removing knockouts.

Terminal bars

The top mounted terminal rail makes the wiring of the neutral and earth connections neat and simple.

Fixings

Multiple fixing points allow the use of No.8 or No.10 screws providing a range of fixing options.

Front cover retained screws

The design of the screw ensures it's retained in the cover preventing loss during the installation.

Full metal DIN rail

Minimised distortion to ensure the devices sit square and are not easily displaced. A stop at the end will also stop devices from sliding off.

Snap-able busbar

Can be snapped in to sections to provide quick and easy configuration of circuits. The plastic shroud is easily cut to size with side cutters.

Cable clamp

Incoming meter tails can be safely secured, even with an RCBO next to the main switch, eliminating stress within the switch terminal.

Meter tail entries

Multiple meter tail entries give you the opportunity to utilise knockouts which aren't directly under the main switch, increasing the bend radius on the cables.

VM206

Switch Disconnecter

Metal switch disconnecter incomer enclosures, single row from 2 to 20 outgoing ways.

Enclosures come supplied with a full metal DIN rail, 63A or 100A switch disconnecter incomer and full complement of earth and neutral terminals along with marking labels, busbar,

instructions, rear cable protector plate and meter tail clamp.

Recommended for use with TT systems when utilising RCBO on outgoing circuits.

Conforms to BS EN 61439-3 Including Annex ZB (16kA rating).

For accessories see page 19. For dimensions see page 23.

All boards contain rear cable entry, boards with knockouts also contain top & bottom knockouts - See page 23.

RCCB Incomer

VM310H

Metal RCCB incomer enclosures, single row from 2 to 14 outgoing ways.

Enclosures come supplied with a full metal DIN rail, 40A, 63A or 100A 30mA RCCB incomer and full complement of earth

and neutral terminals along with marking labels, busbar, instructions, rear cable protector plate and meter tail clamp.

Conforms to BS EN 61439-3 Including Annex ZB (16kA rating).

For accessories see page 19. For dimensions see page 23.

All boards contain rear cable entry, boards with knockouts also contain top & bottom knockouts - See page 23.

Design 10

Flush Consumer Unit

Hager's new flush consumer unit conforming to Amendment 3 of the wiring regulations has been designed specifically for installation in solid or hollow walls. This design strategy allows the back box alone to be installed during the construction, removing the risk of the devices and terminations becoming contaminated with building materials, damaged or stolen and also means factory connections do not need to be disconnected.

The internal adjustable frame houses the terminal bars and devices and has top and bottom flanges that sit on the finished wall surface. This ensures that the front cover will sit flat on to the surface of the wall, with all devices protruding evenly through the front cover without any time consuming adjustments.

Cover & door

The front cover and door assembly complete the consumer unit. When installed the cover and door protrude 31mm from the finished surface of the wall at its maximum depth.

Cable clamp

Cable clamps come as standard on our flush fit boards to help with securing the tails in place inside the board.

Adjustable depth

To allow for a range of installation depths within a wall, the frame is adjustable. There are flanges on the frame which sit on the finished surface of the wall, helping to ensure that the devices always protrude through the front cover a uniform amount, helping to maintain the IP rating of the board.

Knockouts

Knockouts on the top, bottom, sides and rear of the back box allowing multiple cable entry options. Raised sides on the box give a reference for plasterboarding. Oval knockouts can be protected with 38mm open grommet. (VMGROM)

Installation depth

The full metal DIN rail comes with extra support to allow the frame to be adjustable for depth. This allows the board to be installed at a range of depths into the wall. The minimum depth is 72mm allowing for 60mm of studwork and 12mm of plasterboard.

Removable frame

The frame contains all of the devices, neutral and earth terminations and the cable clamp. This can be removed whilst the building work is completed and quickly re-installed into the back-box later. It is then secured with the use of the 4 wing nuts removing the need for any special tools.

Design 10 Flush Consumer Unit

Conforms to BS EN 61439-3 Including Annex ZB (16kA Rating).

Enclosures come supplied with a full metal DIN rail, earth and neutral connections along with incoming device(s), busbar,

grommet strip, rear cable entry plate, cable clamp, marking labels and instructions.

Knockouts located top, bottom and rear of base - See page 24.

Details of the installation method can be found on page 26. For dimensions see page 24.

Min depth in wall 72mm.

Design Range

Dual Row Consumer Units

Dual row boards have been designed to accommodate large numbers of outgoing ways (20+), facilitate installation at Part M height, where there can be limited space due to doorways and allow the option to segregate circuit protection and control.

Covers

Design 10 dual row boards come with a single cover and dual doors. Design 30 Dual Row boards come with separate covers, each with locate and hold tabs to ease installation.

Cable access

Open access under terminal bars to allow flexibility with cabling routes.

Snap-able busbar

Can be snapped in sections to provide quick and easy configuration of circuits.

Knockouts

Rear knockouts allow cable entry to the relevant section of the board. Top and bottom knockouts are rectangular to allow for trunking. Rear knockouts can be protected against sharp edges with supplied grommet strip or cable protector plate (supplied as standard with Design 30). Additional cable protector plates can be purchased for either board Ref: **VM02CE** (pack of 5)

Cable clamp

Incoming meter tails can be safely secured, eliminating stress within the switch terminal. Also able to accommodate an RCBO next to the main switch. Supplied as standard with Design 30 boards, optional extra on Design 10 boards.

ADN120

Single Pole RCBOs - Sensitivity 30mA (6kA)

Compact protection devices which combine the overcurrent functions of an MCB with the earth fault functions of an RCCB in a single unit.

Technical Data

Insulated DIN clip
Complies with BS EN 61009, IEC1009
Sensitivities (fixed)
30mA
Breaking capacity: 6kA
Flying neutral lead: 200mm

Connection Capacity

Rigid = 16mm²
Flexible = 10mm²

Application

1 module devices provide a compact solution for installation in consumer units.

These devices are 1 pole & solid neutral.

All product(s) must be installed by a suitably competent electrician giving consideration to its intended use and in accordance with the current edition of BS 7671 (IET Wiring Regulations).

The Electricity at Work regulations and the Health and Safety at Work Act shall be complied with.

Only equipment and arrangements specified in Hager's technical documentation / catalogue shall be used. Install in the horizontal plane only.

Example shown below is Design 30, same principle applies to Design 10 & Dual Row boards.

Important notice:

To prevent potential overheating from loose connections the installer shall check connections are tight to the torque levels stated on page 20 prior to energizing this board. This check should include factory made connections which may have loosened in transit.

Good workmanship and proper materials must be applied by the installer. The cable entry method shall, as far as reasonably practical, maintain the non-combustable arrangement of the enclosure. Account shall be taken of these instructions.

1 Removal of front cover:

Easy fit front cover assembly allows the cover to be located at the top of the board and locked into place which enables the cover to stay secure when replacing or removing during an installation.

2 Wall Fixing:

The units have multiple fixing points that will suit No.8 & No.10 screws

3 Cable entry facilities:

Electrical knockouts are provided for top or bottom cable entry and are sized and positioned to suit standard trunking i.e 100x50mm, 50x50mm & 40x25mm. Grommet strip is provide to protect the cables when entering the board.

4

Rear cable entries shall enter thorough selected rear knockout; once the knockout is removed the cable protector bracket can be fitted to allow safe installation of the cables. Grommet strip lengths: **Small EKO** – 79mm, **Large EKO** – 127mm **Rear EKO** – 255mm

5

Incoming meter tails can be safely secured using the cable clamp system eliminating stress within the switch terminal.

6

Rear cable entries shall enter thorough selected rear knockout; once the knockout is removed the cable protector plate can be fitted in order to avoid any damage to the cable insulation or sheath during installation.

1

Remove internal chassis.
(No requirement to disconnect factory cable connections)

2

Remove required knockouts before fixing to stud wall
& use provided grommet strip or grommet accessory
VMGROM for cable protection.

3

4

1st fix
complete

Top & bottom edge to be flush with front of stud work, with
left and right edges protruding slightly from stud work

5

Trim excess plaster from around
the box, loosely fit x4 M5 wing
nut to back box

6

Offer up internal chassis, loading chassis on
the metal studs

7

Push internal chassis until it is flush with
the wall surface. Tighten x4 M5 wing nut to
secure internal chassis

8

2nd fix
complete

After wiring installation, offer up cover & door
assembly, secure with the captive screws.

VMHBL

Temporary locking facility (For use with Design 30 Consumer Units)

This device allows the board to be isolated for the safety of tradespersons during construction of a building. The lock surround forms no part of the non-combustable enclosure. With the lock surround removed, the rating of IP2XC is maintained.

Padlock shown is available: ref. JK25A

VMLOCK

Keylock for use with Design 30 Consumer Units

This device allows the board to be locked to prevent unauthorised access.

Cable Access:

Cable access into the metal consumer unit must maintain the integrity of the non-combustible consumer unit so far as reasonably practicable. This can generally be achieved by the installer ensuring that cable access holes they make in the enclosure do not leave gaps greater than:

- 1.0 mm for the horizontal top surface and
- 2.5 mm for all other surfaces of the enclosure that are accessible after installation.

For rear cable access, the minimum number of knockout(s) shall be removed and a cable protector fitted; see illustration above.

Tests on Hager consumer units have indicated that there is no specific need for fire rated cable glands or intumescent sealing in addition to the guidance below with respect to achieving a non-combustible enclosure. However, this does not preclude the designer / installer using fire rated cable glands or intumescent sealing or other methods, should they consider necessary.

**Fitting Hager MCBs and RCBOs:**

Only equipment and arrangements specified in Hager's technical documentation / catalogue shall be used.

1. Isolate the electrical supply from the consumer unit.
2. Remove the front cover.
3. Fully slacken the lower terminal of the device.
4. Fully open the bottom device clip (fig 1.)

5. Locate the device onto the din rail, and busbar. Ensure that the busbar tooth is within the device terminal cage.
6. Close the bottom device clip.
7. While holding the device firmly onto the busbar, fully tighten the lower terminal screw.
8. After fitting all outgoing devices and connecting all outgoing cables, please check the tightness of all cable connections. This should include all factory made connections, which may have loosened during installation or transit.

E-Catalogue

for Phones & Tablets

Our E-Catalogue App is here, browse through thousands of Hager products, with descriptions, technical data and downloadable PDFs available 24/7 online and offline, all at your fingertips. Available on iOS & Android.

Catalogue

Our full catalogue of products, searchable by part reference or common terms, are all available online and offline. Meaning you can keep our whole catalogue with you for whenever you need it. You can even download individual range catalogues and technical data sheets too.

News

Stay up to date with all of the latest Hager news or just take a look at what we've been up to lately, including; product launches, industry news & case studies.

Project Lists

Project Lists give you the ultimate way to store and organise your projects, whether you're looking to create a complex project across multiple phases with hundreds of references, or just a simple list, project lists give you privileged access to Hager specification data.
